

In general I like colors that are more galaxy or space themed.  
Here are some good example of UIs using these colors

Used mostly blue, since it seems like a more neutral or common color compared to bright purple or pink. Use purple and pink to emphasize elements.

Buttons are lighter color by default and get darker when you hover over it.

Like the rounded button look, will also try to make everything slighted rounded to make it look less formal, since it is a more creative app
